ICF TECHNOLOGY INCORPORATED

MEMORANDUM

TO: Paul La Courreye, U.S. Environmental Protection Agency (EPA)

FROM: Adam S. Ng, ICF Technology, Incorporated *A. Ng*

DATE: July 19, 1988

SUBJECT: Review of the Preliminary Assessment of Roberts Wood Products, prepared by Barry Padilla of the California Department of Health Services, dated February, 1988.

EPA ID#: CAD982358897

COPY: FIT Master File
Patty Cook, Ecology and Environment, Incorporated
Don Plain, California Department of Health Services,
Sacramento

Summary:

The information presented in the preliminary assessment is sufficient to complete this section. The Roberts Wood Products site is a five-acre facility located within an industrial tract at 1400 Melody Road in Marysville, California. The areas north and east of the site are residential. Classics Spas, Inc., a manufacturer of fiberglass pools and spas, is the current operator of the site and has been in operation since February 1986. Roberts Wood Products operated the site from 1963 to 1983, producing gunstocks from laminated walnut and pearl. Current and past waste disposal practices at the site are not known. The California Department of Health Services (DOHS) Abandoned Site Project Program discovered the site in 1983 during a drive-by. At this time, DOHS staff noted an on-site oily unlined pond (about 10 feet diameter), stressed vegetation, stains in a concrete drainage ditch, and drums of unidentified waste. During a February 1988 site drive-by, DOHS staff observed about fifty 55-gallon unlabeled drums of unidentified waste along the east side of the site and standing liquid in the on-site pond.

RCRA Status:

The site is not regulated under RCRA. This information was not included in the preliminary assessment.

HRS Factors:

The Preliminary Assessment (PA) did not address all pertinent HRS factors and FIT had to supplement information on surface water uses and on the local rainfall.

The site overlies the Sacramento Valley Ground Water Basin. The depth to the ground water in the area ranges from about 30 to 70 feet below the ground surface. There are two ground-water purveyors that provide drinking water supplies to approximately 10,000 people in the area. The nearest municipal wells are located within 1000 feet of the site. These wells are screened from 134 to 450 feet.

The Feather River, which is the only source of water for the State Water Project, is located less than two miles west of the site. The State Water Project consists of a series of canals and reservoirs which provide about 2.6 million acre-feet of municipal and industrial water throughout California. Beneficial uses of the Feather River include drinking water, recreation, and wildlife habitat. There are no known drinking water intakes along the Feather River in Yuba County (1). The one-year, 24-hour rainfall in the area is 2 inches.

Recommendations/Justifications:

1. EPA

The PA recommended no further action under CERCLA. FIT concurs with the recommendation because a preliminary HRS screening suggests that the site is not likely to be eligible for inclusion on the National Priorities List. Based on the lack of documented CERCLA designated wastes on site and the low potential surface water target population, FIT recommends that no further remedial action be planned at the site under CERCLA.

2. State

A copy of this review will be forwarded to the California Department of Health Services for consideration.

EPA Concurrence:

	<u>Initial</u>	<u>Date</u>
No Further Action	<u>JS</u>	<u>8/15/88</u>
Medium Priority SSI	<u> </u>	<u> </u>
High Priority SSI	<u> </u>	<u> </u>

DATE: July 19, 1988
SUBJECT: Water intakes along the Feather River

According to Mr. Roulands, there is no filing records for any water rights to the Feather River between Starboard and Marysville. This area covers regions south and west of Arboga.
